Dhanori Yellow Pages: MVP Product Spec

Oct 26, 2026 · @Shashank

The MVP is a mobile-first, search-led directory of verified Dhanori businesses and emergency contacts, launching in English, Marathi and Hindi with 200 to 300 verified listings across 6 categories in 12 weeks. Every listing gets a one-tap Call and WhatsApp action. This spec is the brief for the design team's website mockups and the baseline for engineering estimates.

Status: Draft for design kickoff

Decision for this draft: the proposal's heavier items (HL7 FHIR referrals, SDOH coding, geo-tagged job audits, 100+ platform citation sync) move to later phases. They add months of build and need partners we don't have yet. The MVP keeps the parts residents feel on day one: fast search, trustworthy listings, one-tap contact.

Monetization (decided): Google ads, paid ranking and promoted listings. This replaces the proposal's no-ads, no-pay-to-rank stance. Three rules stay fixed: every paid result carries a visible "Promoted" label, Emergency & Utilities results are never paid or boosted, and the ad script loads only after the page is usable (section 2, Monetization).

Type	Link	Notes
Source proposal	Dhanori Yellow Pages: Initial Idea	Technical proposal and architecture blueprint
Data standard	Open Referral HSDS	Listing schema basis (simplified for MVP)
Design / prototype	To be added	Design team to link mockups here
User research	To be added	Output of the validation plan below

1. Problem and users

The problem. Dhanori residents find local help through society WhatsApp groups, word of mouth and national listing apps. Those sources are scattered, often stale, and full of ads and paid ranking. Numbers for a 24/7 chemist, the MSEDCL line office or a tanker operator are hardest to find exactly when they're needed.

Why hyper-local matters. Dhanori blends into Lohegaon, Tingre Nagar and Vishrantwadi, so "near me" on a national app often returns the wrong side of the airport or a vendor stuck behind Porwal Road traffic. Residents think in sub-localities (Porwal Road, Jakat Naka, Gokul Nagar, DP Road), not pin codes.

Target users

Persona	Situation	What they need from us
Urgent resident	Pipe burst at 9 pm, or power out in the society	A working number for someone open now, nearby, in under 30 seconds
Newcomer	Moved into a Porwal Road society last month, no local network yet	Trusted options for maids, milk, doctors, preschools
Planner parent	Comparing preschools and daycares around DP Road	Location, hours and contact for a short list
Local provider	Electrician or small shop, no website, runs on WhatsApp	A free, accurate listing that sends calls, plus an easy way to fix details
Society admin	Keeps a pinned "useful numbers" message for 300 flats	One link to share instead of a stale list

Success metrics (first 90 days after launch)

Metric	Proposed target	How measured
Searches that end in a Call or WhatsApp tap	35% or more	Privacy-safe, cookieless event counts
Searches with zero results	Under 10%	Server-side query log, no user IDs
Listings marked Verified	70% or more of live listings	Admin dashboard
Wrong-number reports per 100 contact taps	Under 2	"Report an issue" submissions
Provider listing requests	100 or more	Submission form

Targets are proposals for the team to confirm (see Open questions).

2. Scope

The MVP is read-heavy and login-free for residents. Providers and residents can submit or correct listings; a small admin team verifies them.

In scope (MVP)

#	Feature	Priority
F1	Master search bar with typo tolerance, synonyms ("chemist" = "pharmacy" = "medical" = "औषध") and sub-locality parsing	P0
F2	Quick-access chips on the homepage (Emergency, 24/7 Pharmacy, MSEDCL, Water Tanker, Electrician, Plumber)	P0
F3	Result cards with name, service, sub-locality, verification badge, Call, WhatsApp, live open/closed status	P0
F4	Filters: category, sub-locality, Open now, Verified only	P0
F5	Listing detail page with full hours, address, map link, services list, last-verified date, report issue	P0
F6	Emergency page: police, fire, ambulance, MSEDCL, PMC water, nearest hospitals; available offline	P0
F7	Category browse pages (one per category and sub-category)	P0
F8	"Add your business" form for providers (no login, OTP on WhatsApp or SMS optional)	P0
F9	"Suggest a business" and "Report an issue" forms for residents	P0
F10	Admin console: review queue, edit listing, set verification status, merge duplicates	P0
F14	English, Marathi and Hindi UI with a language switcher; search accepts Devanagari and transliterated queries ("plumber", "प्लंबर", "nal wala"). Listing data stays as submitted.	P0

#	Feature	Priority
F11	Sub-locality landing pages (e.g. "Services on Porwal Road") for SEO and sharing	P1
F12	Share listing to WhatsApp (pre-filled message with name, number, link)	P1
F13	Structured data (Schema.org LocalBusiness JSON-LD) on every listing page for Google and AI answer engines	P1
F16	Google AdSense slots (see Monetization)	P1
F17	Paid ranking boost, promoted slots and category features, with a "Get featured" page and manual invoicing (see Monetization)	P1
F15	Open data export (JSON, HSDS-compatible)	P2

Monetization

Ads and sponsored listings switch on after launch, once traffic justifies them. Design the slots now so layouts don't shift later.

Element	Rule	Design deliverable
Google ad slot	Max 1 per results page (after the 3rd card) and 1 on listing detail (below hours). Never on Home above the fold, Emergency page, forms or admin. Fixed-size container so the page doesn't jump.	Results and detail mockups with the reserved slot, plus the state when no ad fills
Promoted slot	Up to 2 cards at the top of results, shown when the listing matches the query's category and sub-locality (or lists it under areas served). Must be Verified. Not repeated lower in the list.	"Promoted" card variant (label plus subtle border), clearly distinct from the Verified badge

Element	Rule	Design deliverable
Paid ranking boost	Paid listings rank above unpaid ones within the same matching results, each labelled "Promoted". Relevance filters still apply: an "open now" query never shows a closed paid listing above an open one.	Label placement on a boosted card in a normal list position
Category and sub-locality promotion	1 featured card at the top of each category page and sub-locality page	Featured card on S5 and S6 mockups
Emergency & Utilities	No ads, no promoted slots, no paid boost. Police, fire, MSEDCL, PMC and hospital results stay unpaid.	None (confirm no slots on S7)
Ranking order	1. Promoted slots, 2. paid-boost listings, 3. everything else by text match, Open now, sub-locality and Verified	About page copy explaining paid placement
"Get featured" page	Explains the paid plans (promoted slot, ranking boost, category feature), prices, and how to pay (UPI). Admin handles payments and turns plans on or off by hand at MVP.	One static page plus an entry link on the provider form success screen and listing detail ("Is this your business?")

The labels aren't optional. India's consumer protection rules on dark patterns (CCPA, 2023) treat ads disguised as organic results as a violation, and residents need to tell paid results apart to trust the directory.

Admin console adds: a paid-plan field per listing (plan type, start date, end date), auto-expiry at end date, and a monthly report of paid listings.

Ad consent: show a short consent notice before loading the ad script and default to non-personalised ads, in line with India's DPDP Act. Get a legal check before switching ads on.

Out of scope (MVP)

- User accounts, profiles, favourites or saved lists for residents
- Star ratings, written reviews, comments or any social feed

- Lead bidding or auction pricing, online payment checkout, and any third-party script other than the ad network
- Bookings, payments, quotes or bidding between providers
- In-app chat (WhatsApp deep links cover this)
- Native Android or iOS apps (the site is an installable PWA)
- Coverage beyond Dhanori and its border sub-localities

Deferred from the proposal (revisit after launch)

Proposal item	Why deferred	Earliest phase
HL7 FHIR ServiceRequest and closed-loop referrals	Needs a health or civic partner to consume them; no MVP user asks for it	Phase 3
LOINC / SNOMED-CT / ICD-10 SDOH coding	Only useful with the FHIR integration	Phase 3
Geo-tagged job completion audits and neighbour reviews	Needs resident accounts and a review system, both out of MVP	Phase 2
Automated NAP sync across 100+ platforms	Paid APIs, low value at 300 listings; manual check covers it	Phase 2
Automated ring checks on phone numbers	Manual call verification is cheaper at MVP volume	Phase 2
Voice search	Browser voice input on Android keyboards already works in the search field	Phase 2
4-tier intent classification engine	Keyword plus synonym matching handles MVP queries; revisit with query logs	Phase 2

3. Taxonomy and sub-localities

Six top-level categories: the proposal's five plus Shops & Local Services, which covers the stores, electronics repair, laundries and food outlets named in the project brief.

Categories

Category	Sub-categories (MVP)	Example queries
Emergency & Utilities	Police (Vishrantwadi / Dhanori jurisdiction), fire station, ambulance, MSEDCL office and line repair, PMC water supply, private water tankers	"MSEDCL complaint", "water tanker today"
Daily Essentials	Maid and cook agencies, milk and newspaper delivery, grocery delivery, PMC waste collection, scrap dealers	"maid agency Dhanori", "milkman Gokul Nagar"
Home Maintenance	Plumber, electrician, carpenter, painter, appliance repair (AC, fridge, washing machine), RO service, pest control	"plumber near me", "AC repair Lohegaon"
Healthcare & Wellness	Clinics, 24/7 pharmacies, diagnostic labs, hospitals and nursing homes, dentists, gyms	"24h chemist", "blood test home collection"
Education & Childcare	Daycare, preschool, coaching classes, hobby classes	"preschool DP Road", "maths tuition Tingre Nagar"
Shops & Local Services	Electronics and mobile repair, laundry and dry cleaning, restaurants and tiffin services, hardware stores, tailors	"laundry Porwal Road", "mobile screen repair"

Sub-localities (search and filter values)

Sub-locality	Aliases to index	Notes for search and design
Porwal Road	Porwal Rd, Porwal	Heavy peak-hour traffic; favour providers on the same stretch for urgent queries
Dhanori Jakat Naka	Jakat Naka, Dhanori Naka	Transit and retail hub; pharmacies and clinics cluster here
Dhanori DP Road	DP Road, Dhanori-Lohegaon DP Road	Schools and coaching classes

Sub-locality	Aliases to index	Notes for search and design
Gokul Nagar	Gokulnagar	Narrow lanes; walk-in trades
Tingre Nagar (border)	Tingre Nagar, Tingrenagar	Border area; show listings to both Dhanori and Vishrantwadi searches
Lohegaon (border)	Lohegaon, Airport Road side	Near airport perimeter; hospitals and regional offices
Vishrantwadi (border)	Vishrantwadi Chowk, Alandi Road	Police, fire and MSEDCL offices sit here
Dhanori Gaon / central	Dhanori village, Dhanori	Default bucket when no sub-locality is given

Each listing has one primary sub-locality and an optional "also serves" list. A plumber based in Gokul Nagar who covers Porwal Road shows up for both.

4. User stories and acceptance criteria

Residents

ID	Story	Acceptance criteria
US-01	As a resident, I want to type what I need in one box so I don't have to navigate categories.	Results update as I type (debounced 150 ms). "plumbr porwal" returns plumbers on Porwal Road. Matches name, service, category, sub-locality and aliases.
US-02	As a resident with an urgent need, I want to see who is open right now.	"open now" or "24h" in the query applies the Open now filter. Status is computed from the listing's weekly hours in IST. 24/7 listings show "Open 24 hours".
US-03	As a resident, I want to call or WhatsApp a provider in one tap.	Call uses `tel:+91…`. WhatsApp uses `https://wa.me/91…?text=` with a pre-filled "Hi, I found you on Dhanori Yellow Pages…". WhatsApp button hides when the listing has no WhatsApp number.
US-04	As a resident, I want to know if a listing is trustworthy.	Every card shows Verified or Community-submitted. Detail page shows "Last verified on <date>".

ID	Story	Acceptance criteria
US-05	As a resident, I want emergency numbers even with weak or no signal.	Emergency page loads offline after one prior visit. Police 112, fire 101, ambulance 108 shown at top.
US-06	As a resident, I want to narrow results by area and category.	Filter chips for category and sub-locality. Filters persist in the URL so a filtered link can be shared.
US-07	As a resident, I want to report a wrong number or closed shop.	"Report an issue" on every listing, 3 reasons plus free text, no login. Report enters the admin queue within 1 minute.
US-08	As a resident, I want to suggest a business I trust.	Form takes name, service, phone, sub-locality. Submission is stored as Community-submitted, hidden until an admin approves it.
US-09	As a resident, I want a useful answer when nothing matches.	Zero-result screen suggests the nearest category, the related quick chips and "Suggest a business". Query is logged anonymously.

Providers

ID	Story	Acceptance criteria
US-10	As a provider, I want to list my business for free without making an account.	Form: name, category, services, phone, WhatsApp, address, sub-locality, areas served, weekly hours, optional photo. Takes under 3 minutes on a phone.
US-11	As a provider, I want to update my hours or number.	"Is this your business? Update details" link on the listing. Ownership confirmed by OTP to the listed number. Changes go to the admin queue.

Admin

ID	Story	Acceptance criteria
US-12	As an admin, I want one queue for new listings, edits and reports.	Queue sorted oldest first, with type filter. Approve, edit, reject, merge duplicate.
US-13	As an admin, I want to mark a listing Verified after checking it.	Verified requires: phone answered by the business, address or service area confirmed, hours confirmed. Admin records the date and method (call, visit).
US-14	As an admin, I want stale listings flagged.	Verified listings older than 180 days without re-check show in a "Re-verify" list. Listings with 3 or more open reports are auto-hidden pending review.

5. Design brief for mockups

Design mobile first at 360 px wide, then 768 px and 1280 px. The core job is search, scan, tap to call. Every screen should get a resident from intent to a phone call in 2 taps or fewer.

Design principles

1. **Search is the homepage.** A Google-style layout: logo, one search box, quick chips, emergency strip. Nothing else above the fold.
2. **Contact buttons win.** Call and WhatsApp are the largest tap targets on any card (min 48 x 48 px).
3. **Trust is visible.** Verification badge and open/closed status sit on the card, not behind a tap.
4. **No decoration that costs bytes.** System fonts, SVG icons, no hero images, no carousels, no stock photos.
5. **Readable in sunlight and on cheap phones.** WCAG AA contrast, 16 px minimum body text, works without colour (badges carry text, not just colour).
6. **Local language.** Layouts must survive Marathi and Hindi labels that run 30 to 40% longer than English.

Screens to mock

#	Screen	Must show	States to design
S1	Home	Search box with rotating placeholder ("24h chemist", "plumber near me", "Porwal Road gym"), 6 quick chips, category grid, Emergency strip, "Add your business" link	Default, keyboard open
S2	Search results	Query echo, result count, filter chips (category, sub-locality, Open now, Verified), result cards	Loading, results, zero results, offline
S3	Result card (component)	See card anatomy below	Verified / Community, Open / Closed / Opens at 9 am / 24 hours, no WhatsApp
S4	Listing detail	Name, service, badges, Call and WhatsApp (sticky bottom bar on mobile), weekly hours table, address with "Open in Maps", services list, areas served, last verified date, Share, Report issue, "Is this your business?"	Verified, Community, temporarily closed
S5	Category page	Category title, sub-category chips, sub-locality filter, cards	Populated, sparse (fewer than 3)
S6	Sub-locality page	"Services on Porwal Road", categories with counts, top listings	Populated
S7	Emergency	112 / 101 / 108 large buttons, local police station, fire station, MSEDCL, PMC water, hospitals with 24h casualty	Online, offline (cached)

#	Screen	Must show	States to design
S8	Add your business	Step form (1 Basics, 2 Contact, 3 Hours and area), progress, review screen	Empty, validation errors, success
S9	Suggest / Report forms	Short forms, bottom sheet on mobile	Empty, submitted
S10	Admin console (desktop only)	Queue table, listing editor, verification panel, duplicate merge	Queue, edit, verify
S11	About / How we verify	Plain explanation of Verified vs Community, no-ads promise, contact	Static

Result card anatomy (in order, top to bottom)

1. Business name (bold, 1 line, truncate at 2)
2. Primary service badge (e.g. "Plumber") and category
3. Sub-locality tag with pin icon (e.g. "Porwal Road, near Orchid Hospital")
4. Status line: green "Open now, closes 10 pm" / red "Closed, opens 9 am" / "Open 24 hours"
5. Verification badge: "Verified" (tick icon) or "Community-submitted"
6. Action row: Call (primary) and WhatsApp (secondary), full width split 50/50

The whole card body opens the detail page; the action row does not.

Brand and tone

- Name on site: "Dhanori Yellow Pages" (confirm, see Open questions). Yellow as accent only, not background, for contrast.
- Copy is short and plain: "Call", "WhatsApp", "Open now". No marketing lines.
- Every page footer: "Basic listings are free. Paid and promoted listings are always labelled."

6. Listing data model

One flat listing record for MVP, with field names mapped to HSDS so a later export or FHIR bridge needs no migration. Designers should treat these as the only fields a card or detail page can show.

Field	Type	Required	Shown on	HSDS mapping
`name`	text, 80 chars	Yes	Card, detail	organization.name
`primary_service`	text, 40 chars	Yes	Card badge	service.name
`category`, `sub_category`	enum	Yes	Card, filters	taxonomy_term
`services[]`	list of text	No	Detail	service (many)
`phone`	E.164 (+91…)	Yes	Call button	phone.number
`whatsapp`	E.164	No	WhatsApp button	phone (type: text)
`address_line`	text	No (home-based trades may hide it)	Detail	physical_address.address_1
`landmark`	text, 40 chars	No	Card sub-locality line	location.description
`sub_locality`	enum (section 3)	Yes	Card, filters	location.name
`serves_sub_localities[]`	enum list	No	Detail, search	service_area
`lat`, `lng`	decimal	No	"Open in Maps" link	location.latitude / longitude
`hours[]`	weekday, opens, closes (IST); or `is_24x7`	Yes	Card status, detail table	regular_schedule
`emergency_available`	boolean	No	Badge "Emergency calls OK"	service.description
`languages[]`	mr, hi, en	No	Detail	language
`verification_status`	Verified / Community / Hidden	Yes	Card badge	(extension)
`verified_on`, `verified_method`	date, enum (call / visit)	When Verified	Detail	(extension)
`source`	provider / resident / admin seed	Yes	Admin only	(extension)
`report_count_open`	integer	System	Admin only	(extension)

Privacy rule: provider phone numbers are public by consent (checkbox on the form). Resident submitter details are never shown and are deleted after verification.

7. Non-functional and build requirements

The proposal's performance budget stays. The stack is simplified: at a few thousand listings, the full index fits in the browser, so search needs no live server call.

ID	Requirement	Acceptance criteria
NFR-01	Page weight	Home page under 50 KB compressed (HTML + CSS + JS), excluding the ad script. Ad script loads only after first paint and user interaction. JS under 15 KB. Search index loaded after first paint, under 80 KB compressed at 1,000 listings.
NFR-02	Speed	TTFB under 100 ms from Pune via CDN. Largest Contentful Paint under 1.5 s on Moto G-class phone over throttled 4G. Search results render under 100 ms after keystroke.
NFR-03	Offline	Service worker caches Emergency page, home shell and last search index. Emergency numbers callable with no network.
NFR-04	Privacy	No login for residents. No third-party scripts except Google AdSense, loaded after consent with non-personalised ads by default. Analytics only as cookieless aggregate counts (e.g. self-hosted Plausible or server logs).
NFR-05	Accessibility	WCAG 2.1 AA. Tap targets 48 px. Full keyboard and screen-reader support on search and cards.
NFR-06	SEO and AI answers	Static, crawlable page per listing, category and sub-locality. Schema.org LocalBusiness JSON-LD on each listing. Clean URLs (`/plumber/porwal-road/apex-plumbing`).
NFR-07	Data freshness	Verified listings re-checked every 180 days. Site rebuild and index publish within 10 minutes of an admin approval.
NFR-08	Abuse protection	Rate limit on forms (5 per IP per hour), honeypot field, optional OTP. No public write without admin approval.

ID	Requirement	Acceptance criteria
NFR-09	Ranking transparency	Ranking uses only: text match, Open now, sub-locality match, Verified. Paid plans add a boost on top of these, and every paid result shows a "Promoted" label. Emergency & Utilities results are never boosted. Ranking rules published on the About page.

Suggested stack

Layer	Choice	Reason
Frontend	Static HTML from a site generator (e.g. Eleventy or Astro, zero JS by default), vanilla JS for search	Meets the 50 KB budget
Search	Client-side index (e.g. MiniSearch or Fuse-style) with a synonym and alias dictionary	No server round trip; works offline
Data and admin	Postgres (e.g. Supabase) or a headless CMS with an admin UI	Admin console without building one from scratch
Hosting	Cloudflare Pages or Netlify with CDN edge in Mumbai	Sub-100 ms TTFB
Forms	Serverless function writing to the admin queue	No always-on backend

PostGIS radius search from the proposal is not needed for MVP. Sub-locality tags cover location intent; add geo-distance when listings carry reliable coordinates.

8. Product validation plan

Validate demand and data before building search polish. The riskiest assumption is supply: whether we can collect and keep verified, accurate listings, not whether residents want them.

#	Assumption to test	Method	Pass signal	When
V1	Residents struggle to find local services and trust current sources	15 short interviews with residents from 4 to 5 societies (Porwal Road, DP Road, Tingre Nagar); one 5-question poll in society WhatsApp groups, in English and Marathi	60% or more report a recent failed or slow search; top 10 searched services identified	Weeks 1 to 2
V2	The top searched services are the ones we plan to seed	Rank poll and interview answers; compare to category list	Top 10 needs covered by MVP categories	Week 2
V3	Providers will share accurate details and keep them current	Field visits to 30 providers across Jakat Naka, Porwal Road, Gokul Nagar	70% or more agree to be listed; 50% or more share WhatsApp	Weeks 2 to 4
V4	One person part-time can verify and maintain the directory	Time 50 verification calls	Under 5 minutes per listing on average, so 300 listings take under 25 hours	Week 3
V5	Search-first homepage beats category-first	Clickable prototype test with 8 residents (at least 3 in Marathi or Hindi), 5 tasks (e.g. "find a chemist open now")	80% task success, under 30 s median to the Call button	Weeks 5 to 6, on design mockups
V6	Residents return and share	Soft launch to 3 society groups for 2 weeks	20% or more of visitors return within 14 days; 10 or more shares to WhatsApp	Weeks 10 to 12

#	Assumption to test	Method	Pass signal	When
V7	Providers will pay to be featured	Ask the 30 field-visit providers about promoted and boosted plans at 2 price points each	5 or more say yes at one price	Weeks 2 to 4
V8	Ads don't hurt trust or speed	Compare contact-tap rate and LCP on pages with and without the ad slot during soft launch	Tap rate drops under 10%; LCP stays under 1.5 s	Weeks 10 to 12

Seed data plan

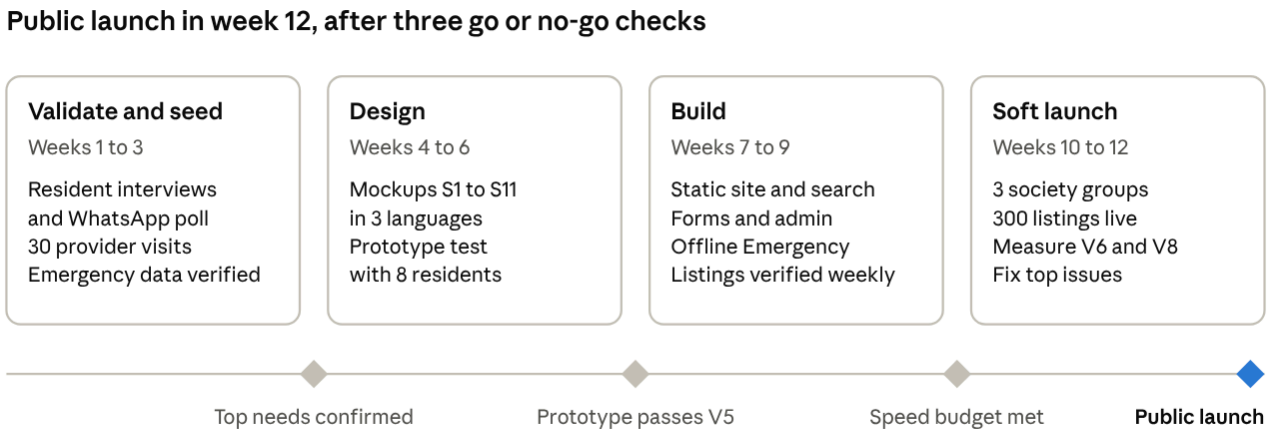

- 50 Emergency and Utilities records collected first (police, fire, MSEDCL, PMC, hospitals); all verified by call before launch.
- Run by one person part-time: cap launch at 300 listings and verify about 40 per week from week 4 to week 11.
- Remaining listings from field visits, provider form and society admins' existing "useful numbers" lists, each verified by call.
- Provider form must let businesses enter their own details, so the admin only checks rather than types.
- No bulk scraping from other directories: their terms forbid it and the data quality is the problem we're solving.

9. Acceptance tests

ID	Input / context	Expected behaviour
T-01	Search "plumber near me" at 9 pm Tuesday	Plumbers open now listed first (open paid listings at the top, labelled "Promoted"), then closed ones with "Opens at…". A closed paid plumber never sits above an open unpaid one.
T-02	Search "plumbr porwal" (typo)	Returns plumbers tagged Porwal Road or serving it
T-03	Search "24h chemist"	Applies Open now; only 24/7 pharmacies or pharmacies open at that moment

ID	Input / context	Expected behaviour
T-04	Search "इलेक्ट्रीशियन" (Marathi/Hindi) and "bijli wala"	Both return electricians
T-05	Search "Tingre Nagar daycare"	Includes daycares in Tingre Nagar and those listing it under areas served
T-06	Search "helicopter"	Zero-result screen with nearest categories, quick chips and "Suggest a business"
T-07	Listing with hours 22:00 to 02:00, checked at 01:00	Shows Open now (overnight hours handled)
T-08	Listing with no WhatsApp number	WhatsApp button hidden, Call spans full width
T-09	Tap Call on Android and iOS	Native dialler opens with +91 number
T-10	Phone in airplane mode, Emergency page visited before	Page loads from cache; 112, 101, 108 dial on tap
T-11	Search "ambulance" when a paid ambulance listing exists	No promoted slot, paid boost or ad on emergency results
T-12	Search "laundry Porwal Road" with one promoted laundry and one boosted laundry in Porwal Road	Promoted laundry first, boosted laundry second, both labelled "Promoted"; neither repeated lower down. Unpaid laundries follow by relevance.
T-13	Results page with ad blocker or no ad fill	Slot collapses to reserved fixed height or hides without layout shift
T-14	Provider submits the form twice with the same phone number	Second submission flagged as possible duplicate in admin queue
T-15	Listing gets a 3rd open "wrong number" report	Listing auto-hidden; appears in admin queue as high priority
T-16	Switch language to Marathi on a results page	All UI labels in Marathi, same results, URL keeps the query and filters
T-17	Home page on throttled 4G, mid-range Android	LCP under 1.5 s; transfer under 50 KB before ads

10. Milestones

MVP plan · 4 phases over 12 weeks, 3 gates

Each gate is a go or no-go check: if it fails, the next phase waits. Ads and sponsored listings switch on after public launch, once traffic qualifies for AdSense. Deferred proposal items (FHIR referrals, reviews, NAP sync) are planned after that, based on usage data.

11. Open questions

Question	Owner	Needed by
Final site name and domain. "Yellow Pages" is used by existing directories; check trademark risk before branding.	Shashank	Before design starts (week 4)
Paid plan tiers and monthly prices (promoted slot, ranking boost, category feature); cap on paid listings per category	Shashank, after V7	Week 4
AdSense approval and DPDP consent approach; legal review of ad and listing terms	Shashank	Before ads go live
Who translates UI copy, category names and search synonyms into Marathi and Hindi, and who reviews them	Shashank	Week 5
Confirm Shops & Local Services as the 6th category at launch	Shashank	Week 2

Question	Owner	Needed by
Confirm sub-locality list and boundaries with residents (section 3)	Shashank, from V1 interviews	Week 3
Show home addresses for home-based trades, or only the sub-locality?	Shashank	Week 4
Confirm success metric targets (section 1)	Shashank	Before soft launch
